

Hytera Motorcycle Audio Solution

- Clear display and remote control
- Convenient installation and operation
- Choices of wireless or wired audio accessories

Safety is paramount when travelling at high speed, yet reliable, clear communication is also a necessity for public safety and security teams. Hytera's innovative Motorcycle Audio Solution provides the rider with a retro-fit kit designed to maximise on board communication whilst minimising distraction.

The Hytera Motorcycle Audio solution features a large LCD display for the handlebar, providing clear indication of volume level and channel information as a control panel. An ergonomically designed on-handle PTT and flexible in-helmet audio accessories support a safer and more comfortable riding experience.

Main Features

Easy Deployment

Simple to retro-fit with just a few brackets, the console works wirelessly with the Hytera MD785(G) mobile radio and wireless adapter stowed on the vehicle.

Helmet-friendly Audio Accessories

A wired earpiece with a microphone fits within the helmet, or choose the wireless option with both earpiece and microphone.

On-handle Control

Minimal distraction but total control, use the wireless console to view and control the radio settings.

Safe Communication

No need to remove your hands whilst riding, utilise the handlebar PTT to safely initiate a communication.

High Quality and Reliable

All components achieve MIL-STD/G and IP54/55 waterproof standard, ensuring outstanding performance in harsh environments.

System Setup

Wireless connectivity is used between the mobile radio and wireless console; the wired earpiece is connected to the wireless console via magnetic jack, preventing cables getting caught and allowing the rider to evacuate easily during emergency situations.
